2 General Information

2.1 Purpose

This document is a report outlining the results of the testing, validation and verification process that was to be followed by JSTanks after the build process.

2.2 Scope

This project is being designed to move from running local applets that require compilation to an on-line script interpreted by browsers. Therefore the testing will mainly consists of the teams ability to port java coding methodologies and object oriented styles, to Javascript. The test report will cover, algorithms, data structures, visuals and the system.

2.3 Acronyms, Abbreviations, and Symbols

| Acronym/Abbreviation | Meaning |
|----------------------|-------------------------------|
| JSTanks | Team Name |
| JSTanks | Project Name |
| JS | JavaScript |
| HTML | Hypertext mark up language |
| CSS | Cascading style sheets |
| git | Git Lab |
| API | Application program interface |
| GUI | Graphical user interface |
| AI | Artificial intelligence |
| PC | Personal computer |

| 4.6 | Automated Script | SUCCESSFUL | 12\6\2016 |
| 4.7 | Automated Script | SUCCESSFUL | 12\6\2016 |

3 Tests Performed

3.1 Tests for Functional Requirements

3.1.1 HTML file test

Name: Loading the game

Description: Test if the game dependencies load in browser

Type: Unit test (dynamic, automatic, black box)

Initial State: Testing Script Loaded in

Input: Click the Run Script button

Output: Script is successful, Loads Dependencies

Pass: All files are able to be loaded up.

Status: PASSED

3.1.2 Standby state test

Name: Standby state

Description: Test if the game automatically runs or waits for user initialization.

Type: Unit test (static, manual, black box)

Initial State: A new browser

Input: Go to home page of game

Output: The home page of the game

Pass: The browser remains on the home page.

Status: PASSED

3.1.3 The game section of the menu test

Name: Menu of game section

Description: Test if the sub menu of new game section which has choices of level selection and map selection show up.

Type: Unit test (dynamic, automatic, black box)

Initial State: Menu in the standby state

Input: Script selects new game

Output: Menu Tests successfully

Pass: The sub menu with choice of starting a new game and quit.

Status: PASSED

3.1.4 The pause section of the menu test

Name: Menu representation

Description: check if the menu contains Home Page/Continue/ Instructions/New Game/Quit

Type: Unit test (dynamic, automatic, black box)

Initial State: A new browser

Input: Click the Run Script button

Output: Menu Tests successfully

Pass: The menu with five sections is represented in the standby state.

Status: PASSED

3.1.5 The level section of the menu test

Name: Menu of level

Description: Test if the sub menu of level section which has choices of level 1, level 2, and level 3 shows up when the level section is clicked.

Type: Unit test (dynamic, automatic, black box)

Initial State: Menu in the new game state
Input: Script runs through levels
Output: New Game Success
Pass: The sub menu with choice of level 1, level 2, level 3, level 4 and level 5.

Status: PASSED

3.1.6 Game start test

Name: Start the game
Description: Test if the game shall be reset and start when [starting a new game] is clicked.
Type: Unit test (dynamic, automatic, black box)
Initial State: The sub menu of the game section
Input: Click the choice of starting a new game
Output: New Game Success
Pass: The standby state of the game with all objects on their initial position on the map.

Status: PASSED

3.1.7 Game quit test

Name: Quit the game
Description: Test if the game comes to ends and the user is redirected to the repo if the quit is clicked
Type: Unit test (dynamic, automatic, black box)
Initial State: The running state of the game
Input: Click the Quit option
Output: Menu Tests successfully
Pass: The game is redirected to the gitlab repository.

Status: PASSED

3.1.8 Game pause test

Name: Pause the game
Description: Test if the game comes to the pause state when the letter 'p' is pressed on the keyboard.
Type: Unit test (dynamic, automatic, black box)
Initial State: The running state of the game
Input: Script triggers a keyboard event 'p'
Output: The game pauses and the pause menu shows up
Pass: The game comes to a pause state. Game content freezes and stays in the temporal positions whilst the Pause menu is overlayed .

Status: PASSED

3.1.9 Game continue test 0

Name: Continue the game

Description: Test if the game comes back to the running state when the letter 'p' is pressed on the keyboard.

Type: Unit test (dynamic, automatic, black box)

Initial State: The pause state of the game

Input: Script triggers a keyboard event 'p'

Output: The game resumes

Pass: All stuff frozen in the pause state are activated and back into the routine.

Status: PASSED

3.1.10 Game continue test 1

Name: Continue the game in the running state

Description: Test if there is any effect on the game when the choice of continue is clicked in the running state.

Type: Unit test (dynamic, automatic, black box)

Initial State: The running state of the game

Input: Script triggers a click on continue

Output: No effect

Pass: No effect on the running state.

Status: PASSED

3.1.11 AI test

Name: The routine of AI

Description: Test if the AI controls tanks to move and fire randomly.

Type: Unit test (dynamic, automated, white box)

Initial State: Single AI in centre of empty game board

Input: The script is run

Output: Ai Test succesful

Pass: The script tracks the AI movement over the course of 2 seconds, and if the AI has a net travel of more then 2 tiles, then it passes.

Status: PASSED

3.1.12 Level test

Name: Levels of the game

Description: Test if the moving speed of tanks controlled by the AI change when level 1, level 2, level 3, level 4 or level 5 is clicked.

Type: Unit test (dynamic, automated, black box)

Initial State: The running state of the game

Input: The script is run

Output: New game test is succesful

Pass: The script checks the AI movement delay value of each game, and if they correspond high to low with the level chosen, then it passes.

Status: PASSED

3.1.13 Default level test

Name: The default level of the game

Description: Test if level one is chosen if no level is selected. Since the game pareses the level form the URL.

Type: Unit test (static, automated, white box)

Initial State: The new browser windwo

Input: Script redirects to the /JSTanks.Html page directly

Output: The game starts with tanks controlled by the AI moving in the lowest speed

Pass: The script checks the AI movement delay value is at the lowest normal value it can be.

Status: PASSED

3.1.14 Instructions test

Name: The Instructions of the game

Description: Test if The window with the Instructions of the game in it pops up when the section of Instructions is clicked.

Type: Unit test (dynamic, automated, black box)

Initial State: New browser window

Input: Script opens instructions page

Output: Pages Section of script is succseful

Pass: The instructions modal opens with the instructions displayed.

Status: PASSED

3.1.15 Tank test

Name: The movement of the tank controlled by the user

Description: Test if the tank controlled by the user moves left, right, up or down when the left, right, up or down key on the keyboard is pressed and fires when the f key is pressed.

Type: Unit test (dynamic, automated, black box)

Initial State: The running state of the game

Input: Script triggers left, right, up, down or 'f' keyboard events

Output: Script tank is succesful

Pass: The tank moves accordingly with the key board input and fires when "F" is pressed.

Status: PASSED

3.1.16 Continuous movement test

Name: The continuous movement of the tank controlled by the user

Description: Test if the tank controlled by the user keeps moving in the direction of left, right, up or down when the left, right, up or down key on the keyboard is held.

Type: Unit test (dynamic, manual, black box)

Initial State: The running state of the game

Input: Hold the left, right, up or down key on the keyboard

Output: The continuous movement of the tank controlled by the user

Pass: The tank keeps moving in the correct direction according to the key held by the user until the user release the key.

Status: PASSED

3.1.17 Bullet launch test

Name: Launch the bullet

Description: Test if a bullet is correctly launched by the fire commands

Type: Unit test (dynamic, automatic, black box)

Initial State: Blank game Screen

Input: Script calls the fire functionality of the game

Output: Script projectiles is successful

Pass: A bullet is fired.

Status: PASSED

3.1.18 Bullet movement test

Name: The movement the bullet

Description: Test if the bullet keep moving in the same direction after being launched.

Type: Unit test (dynamic, automated, black box)

Initial State: The bullet is launched

Input: –

Output: Script projectiles is successful

Pass: A bullet moves continuously in the same direction.

Status: PASSED

3.1.19 Bullet disappearance test

Name: The bullet disappearance

Description: Test if the bullet disappears when it hits the tank, wall, steel, home

base or the boundary of the map.

Type: Unit test (dynamic, automated, black box)

Initial State: The bullet is moving in a specific direction

Input: –

Output: Script projectiles is successful

Pass: The bullet disappears when it hits the tank, wall, steel, home base or the boundary of the map.

Status: PASSED

3.1.20 Wall hit test

Name: The wall hit by the bullet

Description: Test if the wall disappears when it is hit by the bullet.

Type: Unit test (dynamic, automated, black box)

Initial State: Bullet fired toward a wall

Input: –

Output: Script projectiles is successful

Pass: The wall disappears immediately when it is hit by the bullet.

Status: PASSED

3.1.21 Steel hit test 0

Name: The steel hit by the bullet twice

Description: Test if the steel stays the same when it is hit by the bullet twice.

Type: Unit test (dynamic, automated, black box)

Initial State: Bullet fired toward a steel wall

Input: –

Output: Script projectiles is successful

Pass: The steel tile remains on screen but its strength is decreased.

Status: PASSED

3.1.22 Enemy tanks hit test

Name: The tank controlled by the AI hit by the bullet

Description: Test if the tank controlled by the AI disappears when it is hit by the bullet.

Type: Unit test (dynamic, automated, black box)

Initial State: The tank controlled by the AI is on screen

Input: Bullets fired at tank

Output: Script end game is successful

Pass: The tank controlled by the AI disappears when it is hit by the bullets.

Status: PASSED

3.1.23 Home base hit test 0

Name: The home base hit by the bullet for first four times

Description: Test if the home base stays the same when it is hit by the bullet for first four times.

Type: Unit test (dynamic, automated, black box)

Initial State: The home base is on screen

Input: Bullets fired at base

Output: Script projectiles is successful

Pass: The home base stays the same when it is hit by the bullet for the first four times.

Status: PASSED

3.1.24 Home base hit test 1

Name: The home base hit by the bullet at the fifth time

Description: Test if the home base disappears when it is hit by the bullet at the fifth time.

Type: Unit test (dynamic, automated, black box)

Initial State: The damaged home base is on screen

Input: Bullets fired at tank

Output: Script end game is successful

Pass: The home base disappears when it is hit by the bullet a fifth time.

Status: PASSED

3.1.25 User tank hit test 0

Name: The tank controlled by the user hit by the bullet for the first time

Description: Test if the tank controlled by the user stays the same when it is hit by the first bullet.

Type: Unit test (dynamic, automated, black box)

Initial State: The tank controlled by the user is on screen

Input: bullets fired at tank

Output: Script projectiles is successful

Pass: The tank controlled by the user stays the same when it is hit by the bullet for the first four times.

Status: PASSED

3.1.26 User tank hit test 1

Name: The tank controlled by the user hit by the bullet at the fifth time

Description: Test if the tank controlled by the user disappears when it is hit by the bullet at the fifth time.

Type: Unit test (dynamic, automated, black box)

Initial State: The damaged tank controlled by the user is on screen
Input: Bullets fired at tank
Output: Script end game is successful
Pass: The tank controlled by the user disappears when it is hit by the bullet a fifth time.

Status: PASSED

3.1.27 Game over test 0

Name: The player tank is destroyed
Description: Test if the game comes to the end state when the tank controlled by the user disappears.
Type: Unit test (dynamic, automated, black box)
Initial State: The tank controlled by the user disappears
Input: bullets fired at tank
Output: Script end game is successful
Pass: The player tank is destroyed and the game enters an End state.

Status: PASSED

3.1.28 Game over test 1

Name: The home base is destroyed
Description: Test if the game comes to the end state when the home base disappears.
Type: Unit test (dynamic, automated, black box)
Initial State: The damaged home base is on screen
Input: Bullets fired at base
Output: Script end game is successful
Pass: The base is destroyed and the game enters an End state

Status: PASSED

3.2 Unit testing for internal functions

3.2.1 Wall type test

Name: Ask for the type of the wall
Description: Test if the program returns the type of the wall when you ask for it.
Type: Unit test (dynamic, automated, white box)
Initial State: Barriers on screen made of specified wall type
Input: wall.type()
Output: "BARRIER"
Pass: The program returns the type "BARRIER" when wall.type() is called.

Status: PASSED

3.2.2 Steel type test

Name: Ask for the type of the steel

Description: Test if the program returns the type of the steel when you ask for it.

Type: Unit test (dynamic, automated, white box)

Initial State: Barriers on screen made of type steel

Input: steel.type()

Output: "BARRIER"

Pass: The program returns the type "BARRIER" when wall.type() is called.

Status: PASSED

3.2.3 Home base type test

Name: Ask for the type of the home base

Description: Test if the program returns the type of the home base when you ask for it.

Type: Unit test (dynamic, automated, white box)

Initial State: Barriers on screen made of type home base

Input: homebase.type()

Output: "BARRIER"

Pass: The program returns the type "BARRIER" when wall.type() is called.

Status: PASSED

3.2.4 Wall draw test

Name: Draw the wall on the game board

Description: Test if the image of the wall shows up on the position we set on the game board in the right size when we call this function.

Type: Unit test (dynamic, manual, white box)

Initial State: The game board with no image on the position (startX,startY)

Input: wall.draw(canvas,startX,startY,tileSize,t)

Output: The image of the wall shows up on the position (startX,startY) of the game board

Pass: The image of the wall shows up on the position (startX,startY) of the game board in the tileSize.

Status: PASSED

3.2.5 Steel draw test

Name: Draw the steel on the game board

Description: Test if the image of the steel shows up on the position we set on the game board in the right size when we call this function.

Type: Unit test (dynamic, manual, white box)

Initial State: The game board with no image on the position (startX,startY)

Input: steel.draw(canvas,startX,startY,tileSize,t)

Output: The image of the steel shows up on the position (startX,startY) of the game board

Pass: The image of the steel shows up on the position (startX,startY) of the game board in the tileSize.

Status: PASSED

3.2.6 Home base draw test

Name: Draw the home base on the game board

Description: Test if the image of the home base shows up on the position we set on the game board in the right size when we call this function.

Type: Unit test (dynamic, manual, white box)

Initial State: The game board with no image on the position (startX,startY)

Input: homebase.draw(canvas,startX,startY,tileSize,t)

Output: The image of the home base shows up on the position (startX,startY) of the game board

Pass: The image of the home base shows up on the position (startX,startY) of the game board in the tileSize.

Status: PASSED

3.2.7 Wall hit test

Name: Hit the wall

Description: Test if the program decreases the points of strength of the wall after it has been hit.

Type: Unit test (dynamic, automated, white box)

Initial State: Wall on screen

Input: projectile hits wall

Output: Script projectiles is successful

Pass: The wall is destroyed and thus disappears from the game board.

Status: PASSED

3.2.8 Steel hit test

Name: Hit the steel

Description: Test if the program decreases the points of strength of the steel

after it has been hit.

Type: Unit test (dynamic, automated, white box)

Initial State: Steel Walll on screen

Input: projectile hits steel wall

Output: Script projectiles is successful

Pass: One point of strength of the steel wall is decreased after a hit.

Status: PASSED

3.2.9 Home base hit test

Name: Hit the home base

Description: Test if the program decreases the points of strength of the home base after it has been hit.

Type: Unit test (dynamic, automated, white box)

Initial State: home base on screen

Input: projectile hits base

Output: Script projectiles is successful

Pass: One point of strength of the home base is decreased after a hit.

Status: PASSED

3.2.10 Wall health get test

Name: Get health of the wall

Description: Test if the program returns the remaining points of strength of the wall after calling this function.

Type: Unit test (dynamic, automated, white box)

Initial State: wall on screen

Input: projectile hits wall

Output: Script projectiles is successful

Pass: Return the remaining points of strength of the wall after calling this function.

Status: PASSED

3.2.11 Steel health get test

Name: Get health of the steel

Description: Test if the program return the remaining points of strength of the steel wall after calling this function.

Type: Unit test (dynamic, automated, white box)

Initial State: steel wall on screen

Input: projectile hits steel wall

Output: Script projectiles is successful

Pass: Return the remaining points of strength of the steel wall after calling this

function.

Status: PASSED

3.2.12 Home base health get test

Name: Get health of the home base

Description: Test if the program return the remaining points of strength of the home base after calling this function.

Type: Unit test (dynamic, automated, white box)

Initial State: home base on screen

Input: projectile hits base

Output: Script projectiles is successful

Pass: Return the remaining points of strength of the home base after calling this function.

Status: PASSED

3.2.13 Tank Constructor Test

Name: Tank Constructor Testing

Description: Test if a tank object is created with the specified attributes when the constructor is called.

Type: Unit Test (dynamic, automated, white box)

Initial State: empty screen

Input: new tank object is created by script

Output: usertank succesful

Pass: The following methods create the specified tank object in position.

Status: PASSED

3.2.14 Tank Draw Test

Name: Tank Graphics Testing

Description: Test if the image of the tank shows up at the position set by the game board when the function is called.

Type: Unit Test (dynamic, manual, white box)

Initial State: The game board with no image on the position (startX, startY)
newline Input: tankObject.draw(canvas, startX, startY, tileSize)

Output: The image of the tank appears on the position (startX, startY) of the game board.

Pass: The tank is successfully displayed on the correct position on the game board.

Status: PASSED

3.2.15 Tank Hit Test

Name: Projectile Impact Testing

Description: Test if the health points of the tank are reduced after the tank has been hit with a projectile.

Type: Unit Test (dynamic, automated, white box)

Initial State: Tank on screen projectile fired at tank

Input: projectile hits tank

Output: Script projectiles is successful

Pass: Specified points of the tank's health are reduced.

Status: PASSED

3.2.16 Tank Health Test

Name: Tank Health Getter Testing

Description: Test if the method returns the correct number of health points for the tank when called upon.

Type: Unit Test (dynamic, automated, white box)

Initial State: A tank object has been created, and hit by projectile

Input: projectile hits tank

Output: Script projectiles is successful

Pass: The method returns the correct number of health points remaining for the tank object.

Status: PASSED

4 Nonfunctional Requirements

4.1 Appearance / Style

Description: A survey will be provided to classmates whom will test the game and fill out the survey.

Questions:

- Can user Tank be distinguished from AI.

Is your player easily distinguishable from the Enemy's? (6 responses)

Figure 2: Tank distinguishability Feedback

- Can wooden walls be distinguished from Steel walls.

Can you tell that one wall is stronger then the other? (6 responses)

Figure 3: Rate wall strength by material

If you answered yes for the question above. Which one looks stronger.
(6 responses)

Figure 4: Distinguish wall materials

- Can the home base be distinguished

Which one is the Home-base? (6 responses)

Figure 5: Distinguish Home Base

- Is the overall colour scheme is an eyesore.

Rate the overall Colour Scheme (6 responses)

Figure 6: Colour Scheme Feedback

- Does the menu cover everything needed to play the game.

Pass: If the game passes all manual unit tests on all browsers, the requirement is met.

Status: PASSED

4.2 Ease of Use

Description: A survey will be provided to classmates whom will test the game and fill out the survey.

Questions:

- Is the response time satisfying

Is the response time adequate? (6 responses)

Figure 7: Response Time Feedback

- Is the game straight forward to play

Is the game straight forward in nature? (6 responses)

Figure 8: Game Play Feedback

- Are the instructions convoluted in nature.

Are the instructions convoluted in nature? (6 responses)

Figure 9: Instructions Feedback

- Are all menus understandable.

Are the menus intuitive and easy to understand? (6 responses)

Figure 10: Menu Feedback

Pass: If the game passes all manual unit tests on all browsers, the requirement is met.

Status: PASSED

4.3 Accessibility Requirements

Description: Test if the game functions on stated browsers. How: running all manual unit tests from section 4.1 on the following browsers:

- Google Chrome
- Mozilla Firefox
- Apple Safari

Does the game run on your web-browser? (6 responses)

Figure 11: Browsers Feedback

Pass: If the game passes all manual unit tests on all browsers the requirement is met.

Status: PASSED

4.4 Performance

Description: The game should run at an equal speed across all platforms and hardware specifications.

How: Playing a standard game on the following systems:

- Late 2013 - MacBook Pro
- Lab - Virtual Computer
- Thode - Virtual Computer
- 2014 - Surface Pro 3

What Operating System do you use? (6 responses)

Figure 12: Operating System Feedback

Pass: If game runs at similar speeds across all platforms, where relative similarity will be decided by tester.

Status: PASSED

4.5 Maintainability

Description: The game's source code should be easy to read, maintain, and learn from.

How: Have a classmate whom does not work with JS to read over an object file, and have them tell us if they find the code easy to understand.

Pass: Classmate states that code is easy to read and learn from.

Status: PASSED

4.6 Security

Description: The game should not access and send user data to an external source

How: Download the source files, then close all network connections.

Pass: If the game is able to run off-line, it is not sending any data back. Reasoning: If one method in JS fails the entire script usually crashes

Status: PASSED

4.7 Legal Requirements

Description: The game should follow Canadian Anti-Spam legislation

How: Review legislation and look through code to ensure legislation is followed.

Pass: Legislation is not violated.

Status: PASSED

5 Comparison to Existing Implementation

The open source game software we are working on is simply a Java application in its existent form. We are uploading the same game on a web browser which requires a different programming language altogether. As a result, we have not been able to use any existing code and have had to program the game completely from scratch. We have also not looked into the Java code to learn its implementation style or use any ideas for specific functions. Therefore, any similarities between our code and the existing code are coincidental.

The major difference between the two implementations is that we have HTML, and CSS files in addition to the JavaScript source code which are required for any kind of web development. The existing code works with multiple classes representing different aspects of the game which can be seen in our code as well. However, it has more classes, three of them which are main method classes which can be explained by the programming language used. Our implementation has no main method or class, but instead the HTML file is used as the main class which drives the whole game. Another important difference is the style of programming; the existing implementation has made use of threads which we have not as we are still learning to work with JavaScript. The use of object oriented programming is evident in both implementations. For example, objects for tanks, bots, and barriers are included in both.
